

## **€250,000 Investment from T3 Venture Capital Investment Fund to Nanomik Biotechnology!**

**Launched by the Türkiye Technology Team Foundation (T3 Foundation), the T3 Venture Capital Investment Fund (T3 GSYF) has made a €250,000 investment in Nanomik Biotechnology, which develops natural protection solutions for the agriculture and food sectors.**

### **A Local Biotech Startup on Its Way to Becoming a Global Player**

The T3 Venture Capital Investment Fund (T3 GSYF), established by the Türkiye Technology Team Foundation (T3 Foundation) to support the entrepreneurial ecosystem, has invested €250,000 in Nanomik Biotechnology, which develops innovative solutions in the agriculture and food industries. Successfully completing its pre-Series A bridge round, Nanomik raised a total of €1 million in this round. The new investment will be used to accelerate the company's growth in the U.S., Türkiye, and EMEA (Europe, Middle East, and Africa) markets, build global sales channels, and expand its R&D capacity.

Founded in Istanbul in 2015, Nanomik develops biological protection solutions as alternatives to chemical and synthetic substances used in agriculture, food, and construction.

With its patented microencapsulation technology, the company increases the stability and effectiveness of natural active ingredients, offering sustainable, residue-free, and environmentally friendly products.

Field trials conducted in eight different countries over the past two years have proven Nanomik's solutions to be high-performing and compliant with biocide regulations in the U.S. and Europe.

With this investment, the company aims to move from limited-scale pilot applications to full-scale commercialization.

Buse Berber Örçen, Co-Founder of Nanomik Biotechnology, which received the €250,000 investment from the T3 Venture Capital Investment Fund, said:

"This bridge investment round marks an important milestone in our global growth strategy. In the coming period, we will establish strong distribution partnerships in the U.S. and EMEA regions and bring our natural, residue-free protection solutions to broader markets."

The T3 Venture Capital Investment Fund invests in technology startups operating in fields such as artificial intelligence, biotechnology, mobility, advanced electronic systems, software, and robotics.

The fund not only provides financial support, but also offers technical knowledge, strategic guidance, and collaboration opportunities to help startups scale.

T3 GSYF continues its investments with a vision of growing technology-focused ventures and building a sustainable future.
